

Strongest memorisation-time predictors of the delay per setup (training-performance metrics removed; D has no crossed run with a checkpoint near t_memo). Small n on A', C, E.

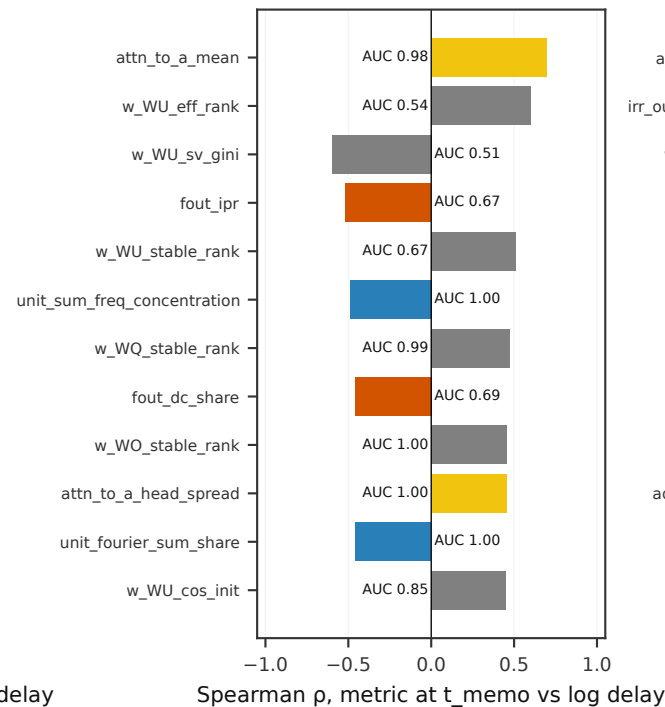

A (MLP, Z97, GD)
n crossed = 52

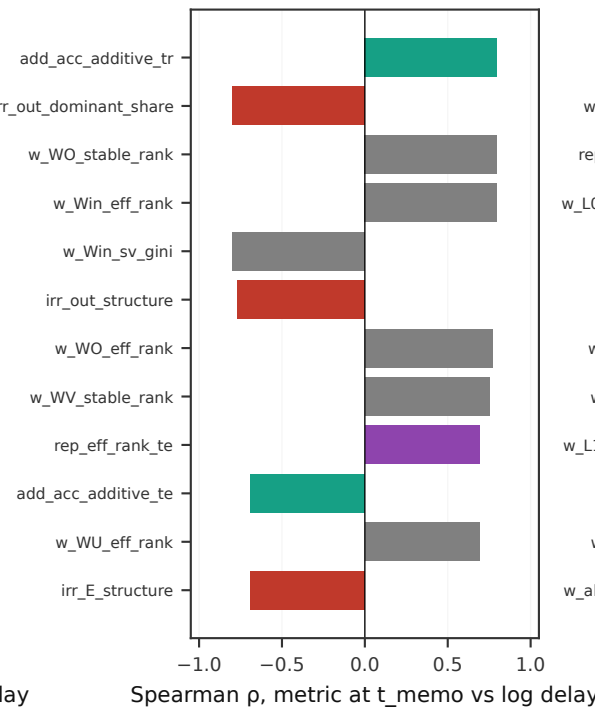

A' (MLP, Z97, AdamW)
n crossed = 10

B (transformer, Z113)
n crossed = 14

C (transformer, S5)
n crossed = 10

E (MLP, MNIST)
n crossed = 6
