

Client deviations from the client mean share no direction; their raw correlation with the delay is mostly the number of clients

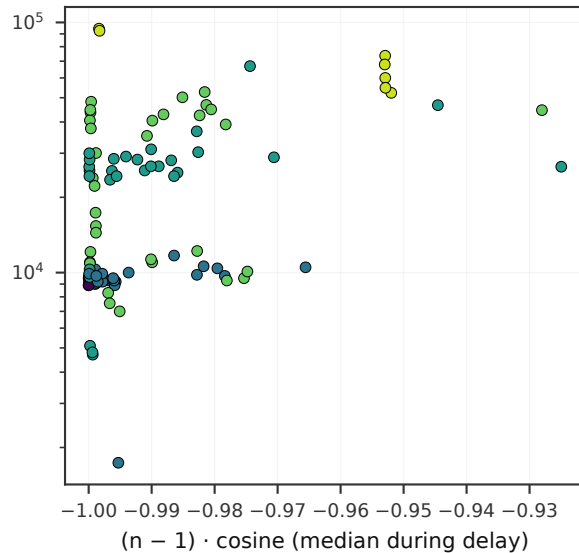

(a) -1 = independent, zero-sum deviations

(b) A: ρ with log delay = 0.81 (n=103)

(c) A: ρ with log delay = 0.43 (n=103)

(d) A: ρ with log delay = 0.41 (n=103)
