

IID client-count ladder: held-out accuracy per run

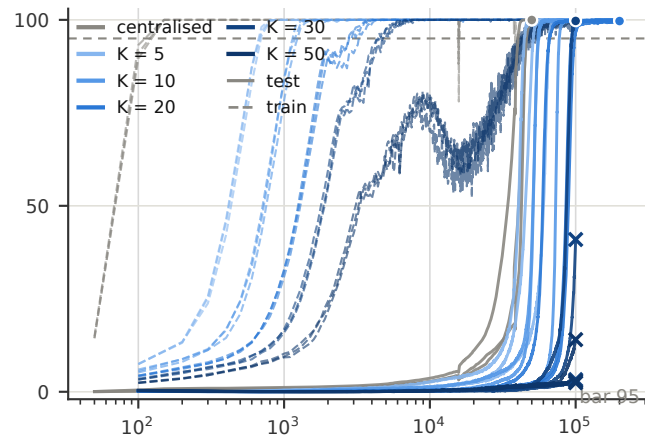

A · quad-MLP, mod 97, GD
 $\alpha 0.3 \cdot \text{wd } 0 \cdot \text{iid} \cdot E = 5 \cdot 35 \text{ runs}$

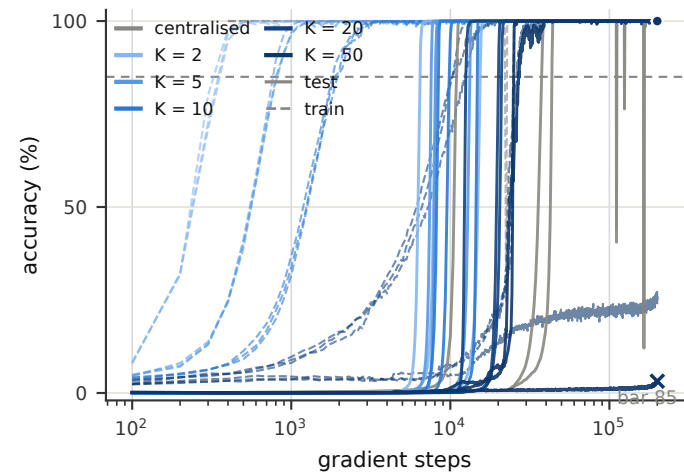

A' · quad-MLP, mod 97, AdamW
 $\alpha 0.2 \cdot \text{wd } 0.1 \cdot \text{iid} \cdot E = 5 \cdot 20 \text{ runs}$

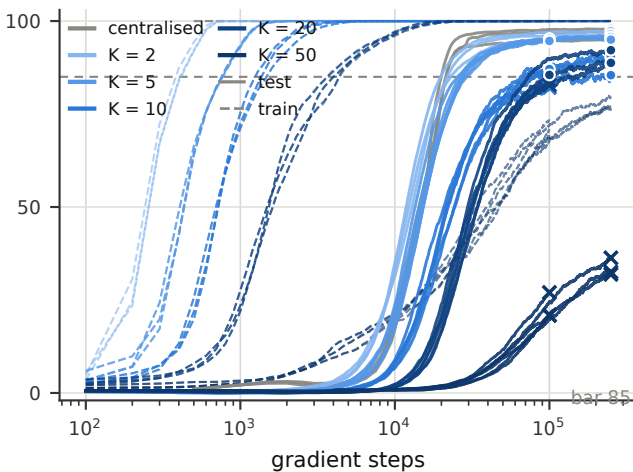

B · transformer, mod 113
 $\alpha 0.3 \cdot \text{wd } 0.1 \cdot \text{iid} \cdot E = 5 \cdot 18 \text{ runs}$

C · transformer, S_5
 $\alpha 0.4 \cdot \text{wd } 1 \cdot \text{iid} \cdot E = 5 \cdot 18 \text{ runs}$

D · quad-MLP, S_5
 $\alpha 0.3 \cdot \text{wd } 1 \cdot \text{iid} \cdot E = 5 \cdot 30 \text{ runs}$

E · ReLU MLP, MNIST-1k
 $n_{\text{train}} 2000 \cdot \text{wd } 0.1 \cdot \text{iid} \cdot E = 5 \cdot 24 \text{ runs}$
